PIT BULL TIRES - GETTING US OUT OF STICKY SITUATIONS SINCE 2005

"Pit Bull tires are simply the best off road tires available today. We run them on all of our rigs. Traction in the rocks is truly awesome. We wheel on Lava rock mostly and it rips tires to shreds. Not Pit bulls, they have held up extremely well. Every terrain we have had them in, they are outstanding. We have wheeled deep sticky mud - no problem, deep snow - no problem, sand - no problem. The increase in capability over other tires is nothing short of amazing!!"
Corey Casper - Casper Customs, Rigby Idaho

"I have the orange blazer pictured above and here is what I think about your tires. They are awesome. They have enabled my blazer to go places I did not think possible. There really is no comparison to any other tires I have run (and I have run most). I drive my blazer everywhere and they just keep getting better. My friend recommended these tires to me and his glorious reviews of them had me thinking, "whatever dude, a tire's a tire - some a bit better - some not so much." Well, then I bought some myself, now I find myself doing the same thing. I have had them in deep snow, they crawled right along; if I wanted to go faster I just gave it some throttle and speed picked up instantly. I wheel rocks alot, and on lava rock around here the traction on those is absolutely ridiculous. The tires enable my rig to act like it is built more than it is. In the mud they are awesome. The more I wheel them, the more impressed I am with these. If you want a serious off-road tire that you can drive around on, Pit bull Rockers are the way to go."

Jarred (Missouri):

Pit Bull Tires have yet to disappoint me. After running their bias-ply Rockers for about 3 years now (and loving them) and then trying the new Maddog Radial tires, I am convinced this is the most on-road/off-road worthy tire available. The new 38.5x1350R16 Maddog Radials, which I have been running for around 5 months now, are showing very little wear at all with just under 10,000 miles on them! I noticed much improved ride quality as well as improved handling with this much sturdier 10 ply-rated radial design. The new Radial Maddog continued to impress me as I powered through a muddy trail as an on/off-road M/T tire should!!! I believe Pit Bull has really stepped up to the plate with its new line of Radial Light Truck Tires, combining highway comfort with proven off-road tenacity. Without a doubt, these dogs just got tougher! – 2009
